Steel Bridge II

Picture Description¹⁾

A black and white photograph of cars driving across a bridge with intricate metalwork.

Analysis¹⁾

This black and white photograph presents a symmetrical view down the center of a bridge. The bridge structure is made of dark, riveted steel, creating a stark contrast against the overcast sky. Two large, arching supports with ornate finials frame the scene, leading the eye toward a series of smaller arches receding into the distance. Cars are visible on the bridge roadway, adding a sense of scale and activity. The overall mood is one of industrial grandeur and quiet motion, capturing a moment frozen in time.
